LC

MULTI-CRUSHERS

SMART SOLUTIONS TO PRESERVE THE ENVIRONMENT

IDEAL FOR THE TREATMENT
OF WEEE AND BALED WASTE

LC multi-crushers are double-shaft shredders with special blades that are ideal in treatments where product preparation is required to allow subsequent manual sorting or automatic sorting. Working without a screen, they can process high material flows. LC multi-crushers are mainly used in the processing of WEEE (Waste and Electrical and Electronic Equipment) to allow the opening of the appliance for subsequent sorting or as a treatment system for baled pressed materials ensuring the correct opening of the bale for subsequent sorting.
